1/8" BSP female connector
- Applications:
Calibrating Production
Line Leak Detectors

Furness

Description

The FCO99 series of calibrated leaks are designed to connect to production line pressure decay and flow type leak detectors.

The calibrated leak device uses compressed brass material to pre-set a leak rate at a certain test pressure. As there are no moving parts the device remains constant at a set pressure provided it is not contaminated by oil, dirt or water.

FCO99 Calibrated Leaks can be checked using the Furness Controls FCO210 Microcalibrator.
